

UniTrack360: Understanding Our Project

What is UniTrack360?

UniTrack360 is a smart, all-in-one digital system designed to solve the biggest challenges universities face in managing student records, attendance, and academic performance. Imagine a single platform that does everything a university needs – from tracking who's in class to measuring how well students are learning.

Why Did We Create This Project?

In universities today, managing student information is complicated. Teachers spend hours doing paperwork. Students struggle to track their progress. Administrators find it difficult to get a complete picture of academic performance. Our project aims to fix all these problems with one powerful solution.

Key Problems We're Solving

1. Attendance Tracking Hassles

- No more manual attendance registers
- Easy marking for teachers
- Instant attendance reports
- Automatic eligibility calculations

2. Complex Academic Performance Tracking

- Track student learning outcomes precisely
- Measure how well courses meet educational goals
- Provide clear insights into student progress
- Help teachers improve their teaching methods

How Our System Works

User Roles

Our system has different access levels for everyone:

- **Super Admin:** Controls everything in the system
- **Department Admin:** Manages department-specific tasks
- **Teachers:** Mark attendance, create assessments
- **Students:** View personal academic records

- **Child Admin:** Helps with administrative tasks

Key Features

1. Attendance Management

- Multiple ways to mark attendance
- Past date attendance correction
- Leave application tracking
- Detailed attendance reports

2. Academic Performance Tracking

- Define Course Learning Outcomes (CLOs)
- Map CLOs to Program Learning Outcomes (PLOs)
- Track student performance against these outcomes
- Generate comprehensive performance reports

3. Result Processing

- Automatic GPA calculations
- Semester and cumulative result generation
- Transcript creation
- Performance analytics

Technical Details (Simple Version)

What We're Using

- **Frontend:** Next.js (makes the website look good and work fast)
- **Backend:** Node.js (handles all the complex calculations)
- **Database:** MySQL (stores all the information safely)
- **Authentication:** Secure login system

Our Project Goals

1. Reduce administrative workload
2. Provide real-time academic insights
3. Make university management easier
4. Help improve teaching and learning

Unique Aspects

- First system to combine attendance and learning outcomes
- Works for entire university ecosystem
- Customizable for different university needs
- User-friendly interface for everyone

Potential Impact

- Save time for teachers and administrators
- Give students clear view of their academic progress
- Help university make data-driven decisions
- Improve overall educational quality

Future Plans

- Add artificial intelligence features
- Develop mobile application
- Create more advanced reporting tools
- Continuous system improvement based on user feedback

Our Team

We are five passionate computer science students who believe technology can transform education. This project is our vision to make university management simpler, smarter, and more efficient.

How Can You Help?

- Provide feedback
- Share your university's specific challenges
- Collaborate on making the system better

Final Thoughts

UniTrack360 is more than just a software project. It's a solution that can potentially change how universities manage their academic processes, making education more transparent, efficient, and student-focused.

Pro Tip for Presentation:

Focus on the problem-solving aspect. Show how this system can save time, reduce errors, and provide

insights that were impossible before. Use simple language and real-world examples to make your point clear.

Key Message:

We're not just creating a system; we're creating a tool that can make education management smoother, smarter, and more effective for everyone involved.
